

Location: R&D Facility Houston, TX
Position: **Technical Service Engineer, CPVC**
Reports to: Global Technical Service & Application Development Manager

POSITION SUMMARY:

The Technical Service Engineer will provide technical assistance to customers in the Americas and Europe CPVC market segment. This position will be critical to our success as we continue to grow our product portfolio within Specialty Chemicals.

Duties and Responsibilities

- Maintains and promotes a safe work environment, complying with safety policies and procedures.
- Participates in global, cross-disciplinary teams focused on commercialization of new business.
- Provides technical support to customers in the applications of CPVC resins as well as polyvinyl alcohol.
- Ensures product quality by working closely with QC personnel and providing input for quality improvement opportunities.
- Documents results of research activities so that findings can be leveraged throughout the company.
- Technical lead on multiple development projects simultaneously.
- Becomes a subject matter expert in focused application areas of compounding/extrusion.
- Maintains the confidentiality of proprietary information.

Qualifications and Skills

- Graduate degree in Chemistry, Polymer Chemistry, Chemical Engineering or related physical science from an accredited university.
- Hands on compounding, extrusion and injection molding experience.
- PVC polymerization experience and/or PVB (polyvinyl butyral) experience would be a significant advantage.
- Demonstrated relevant work experience (5 years minimum), providing technical support and solutions to customers in a related industry.
- Ability to work collaboratively with team members with different professional and cultural backgrounds.
- Ability to travel both domestically and internationally.
- Excellent verbal and written skills and team-work orientation to be displayed both internally and externally with customers and suppliers.
- Self-motivated and able to work independently with minimal supervision.
- Ability to multitask and follow through.

Desirable

- International Experience.
- Japanese Language Proficiency.
